

I FATTI NOSTRI

Dear Customer
BASF is proud to present
"I FATTI NOSTRI"
n°6 of 2013

This issue focuses on the introduction of a breakthrough technology for thermal and electrical insulation:

DURAFELT F110 – Non-woven fabric made from 100% preoxidized polyacrylonitrile fiber, needle-punched, black colour. Available in weight of 120g or 200 g/sqm, for its thermoplastic matrix it has been studied expressly for the production of composite material in automotive

Today it is always more used as a new barrier against the fire in protective garments in the industry and furniture, since it does not melt and does not burn.

[datasheet](#)

DURAFELT F110 has got certification against fire from qualified certification Institutes

DURAFELT F110 presents these competitive advantages:

- High dielectric resistivity > 10⁸ Ohm /cm
- Good resistance to acids, alkali and many chemicals and solvents;
- Resistant to molten metal splashes from welding: up to 180 g of molten iron and 230 g of molten aluminium.

Samples for trial test are available on request

I FATTI NOSTRI 2013 introduces a combination between high technology innovative products of our new partners of the thermal electrical field and our signature products: both will be proposed at special prices in order to promote the tests and to receive the customers feedback

TG430/Y0533 - TERMO E GLASS fabric from continuous E-glass 9 micron yarn
Rolls available in width 1000- 1200-2000 mm
Also available as fire blankets, case included, to extinguish little fires at home or in the garden.

Application: 04 FIRE
